

“Whole Food Nutrition Begins with Sun, Water, and Fertile Soil.” – *Dr. Royal Lee*

## Quality Starts on our Certified Organic Farm

The Standard Process Farm is where we organically grow strong, vital plants for use in our whole food supplements. To maintain our organic certification, we keep detailed records of our farming practices and follow strict guidelines, which include meeting organic weed and pest control and prevention standards. As an additional measure, Standard Process routinely tests the soil’s mineral and nutrient levels. No chemical fertilizers, herbicides, pesticides, or GMO seeds are ever used in our organic growing process.

In 1929, our founder, Dr. Royal Lee, began making whole food supplements that would provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized.

That’s why our product formulas contain unique combinations of whole foods, which provide support to the healthy functioning of every body system.

## Quality From Seed to Supplement®

*At our office, we believe that given the proper nutrition, your body has the amazing capability of keeping itself healthy. We also believe that nutrition should be individualized to meet each patient’s needs. For these reasons and many more, we proudly recommend Standard Process whole food supplements.*

# Whole Food Nutrition for Over Eighty Years

“Whole foods are the best natural source of vitamins.  
The key to the highest quality is the manufacturing process.”  
– Dr. Royal Lee

Because we grow many of our raw materials, the timeline to bring one bottle of Catalyn® to market is 282 days.

## Caring for the Environment

At Standard Process, we are concerned about the environment. That is why we have put eco-friendly practices in place during many phases of production. Even our packing material used in shipment is biodegradable or recyclable. Being environmentally conscious is just a part of who we are.

Being involved from the start gives us a unique advantage—we have more control over the quality of our raw materials and our supplements.

## From Seed to Supplement®

Standard Process oversees the manufacturing process from the moment a seed is planted until the finished product is packaged and shipped to your door. From growing organic crops on our company-owned farm to utilizing a state-of-the-art manufacturing facility, we ensure that our products exceed your expectations of efficacy, potency, and quality.

## Our Exclusive Custom-engineered Manufacturing Processes

By controlling every facet of our manufacturing process, we can ensure that nutrients are preserved at every stage for the highest quality supplements.

**After Harvest** crops are processed immediately to preserve their nutrients. All of the plant materials are chopped and either dried or juiced and then dried. The juice is pressed from plants and separated from the pulp, leaving a concentrated product containing both fat- and water-soluble nutrients.

**In the Facility**, selected USDA-certified animal tissues are ground then subjected to a multistep separation process to make our Protomorphogen™ and Cytosol™ extracts—unique to the industry—providing nutritional support at the cellular level. Low-temperature, high-vacuum dryers preserve the nutrients in animal tissues and plants, which would otherwise be destroyed by increased heat.

**During the Final Steps** natural binding ingredients, such as honey, are used for tableting. No artificial flavorings are ever used. Precision tableting and capsuling machines allow for high-volume production without sacrificing quality.

## The Highest Quality in the Industry

Our quality assurance program meets and exceeds the most stringent quality standards.

- ◆ cGMPs (Current Good Manufacturing Practices), written specifically for the dietary supplement industry and regulated by the FDA, are being utilized at Standard Process.
- ◆ Degreed scientists conduct testing for quality and safety throughout our manufacturing process, from our farm to final product. On average, a product is tested six times before leaving the facility.
- ◆ We utilize analytical methods approved by the Association for Analytical Communities (AOAC) and the United States Pharmacopeia.
- ◆ Assays are performed on product batches to ensure nutrient content and that our label claims are met.

## The Professional Touch

Behind every bottle we sell is a health care professional with the knowledge and expertise to develop a program of care that is specifically tailored to meet your health needs. This is why Standard Process products are offered exclusively through qualified health care professionals.

## Science Meets Supplements

Our Research & Development Department, consisting of onsite degreed scientists, provides a solid scientific basis for the safe and effective use of our products.
